

WORKING HARD???

YOU DESERVE ARRAYS!

BLAKE REGAN

SENIOR SECURITY ANALYST

FEBRUARY 11TH, 2021

DC CYBER SECURITY PROFESSIONALS

WHOAMI

- Blake Regan (@crashOver1d3)
 - Father and Husband
 - Started in IT in 2010, formerly worked in Construction Industry
 - Started in Information Security 2014
 - Hockey Fanatic (Fan and Player)
 - Automation enthusiast
 - Serial Learner

@CRASHOVER1D3
[HTTPS://GITHUB.COM/CRASHOVER1D3](https://github.com/crashover1d3)

EMPLOYMENT AND EDUCATION

- Senior Security Analyst at Wesco Distribution, Inc
- Previously Motorola Solutions, Government and Public Safety: Information Assurance Vetting
- BAsC, Information Systems Security
- Certs:
 - GIAC GCWN, GCIH
 - CompTia Security+, Network +, Project +

DISCUSSION

- What is an array?
- Creating, Adding to, and Indexing data in arrays
- Exporting and Importing data with arrays
- Processing data in an array to take an action

Examples will be discussed and demonstrated in PowerShell. Follow along if you like!

DISCLAIMER

- PowerShell scripts referenced in slides available on GitHub. Please do not use the scripts in production until you understand how they work in test environment.

WHAT IS AN ARRAY?

- A list or collection of objects or variables stored in memory
- No fixed length or size parameters
- Single item in an array often called “element”
- `$array = @()`
- Very powerful way to organize and process data sets

WHAT IS AN ARRAY?

CREATING AN ARRAY

```
PS > $StanleyCups = @("Blackhawks",6,"Captials",1)
```

```
PS> $StanleyCups
```

Blackhawks

6

Captials

1

```
PS > $StanleyCups.Count
```

4 (elements)

```
PS>
```

@CRASHOVER1D3

[HTTPS://GITHUB.COM/CRASHOVER1D3](https://github.com/crashover1d3)

WHAT IS AN ARRAY?

CREATING AN ARRAY

```
PS > $PresidentsTrophies = @("Blackhawks",1,"Captials",2)
```

```
PS > $PresidentsTrophies
```

Blackhawks

2

Captials

3

```
PS> $PresidentsTrophies.Count
```

4 (elements)

```
PS>
```

@CRASHOVER1D3

[HTTPS://GITHUB.COM/CRASHOVER1D3](https://github.com/crashover1d3)

WHAT IS AN ARRAY?

ADDING TO AN ARRAY

Using the += operator, we can add or append data to an existing array.

Ability to add objects, variables, strings, or integers.

```
PS>$StanleyCups += ("Bruins",6)
```

```
PS>$StanleyCups
```

```
Blackhawks
```

```
6
```

```
Capitals
```

```
1
```

```
Bruins
```

```
6
```

```
PS>
```

```
*For extra fun, use $Bruins=@("Bruins",3); $PresidentsTrophies += $Bruins
```

@CRASHOVER1D3

[HTTPS://GITHUB.COM/CRASHOVER1D3](https://github.com/crashover1d3)

WHAT IS AN ARRAY?

INDEXING INTO ARRAYS

- Arrays are indexed using 0 based number scale
- Reference the first element in the array using [0], for the second element, [1]
- Or you can say, if you have 6 elements in the array, the first is [0] and the last is [5]

```
PS> $StanleyCups.Count
```

```
6
```

```
PS> $StanleyCups[0]
```

```
Blackhawks
```

```
PS> $StanleyCups[2]
```

```
Capitals
```

```
PS>
```

@CRASH0VER1D3

[HTTPS://GITHUB.COM/CRASH0VER1D3](https://github.com/crash0ver1d3)

WHAT IS AN ARRAY?

INDEXING INTO ARRAYS CONTINUED

- Can you make an array of arrays? Yes we can!

```
PS> $Trophies=($StanleyCups, $PresidentsTrophies)
```

```
PS> $Trophies
```

```
C:\Users\Administrator> $PresidentsTrophies
Blackhawks
2
Capitals
3

C:\Users\Administrator> $StanleyCups
Blackhawks
6
Capitals
1
Bruins
6

C:\Users\Administrator> $Trophies
Blackhawks
6
Capitals
1
Bruins
6
Blackhawks
2
Capitals
3

C:\Users\Administrator>
```

EXPORTING AND IMPORTING DATA WITH ARRAYS

- Import-csv and Export-csv PowerShell cmdlets
- Store data for offline archive
- Create detailed reports
- Pass data as pipeline object with | operator
- HTML, JSON, CSV formats supported

EXPORTING AND IMPORTING DATA WITH ARRAYS

EXPORT-CSV

```
PS> $Processes = Get-Process
```

The Get-Process cmdlet created an object with values, for each process
Storing into variable created a collection of these objects. Also known as array.

```
PS> $Processes.Count (Results will vary, based on system)
```

```
PS> $Processes | export-csv .\Processes.csv
```

```
PS> $Processes = $null
```

Cleared the variable contents from memory

EXPORTING AND IMPORTING DATA WITH ARRAYS

TIPS AND TRICKS

`$Processes = import-csv -path .\Processes.csv | out-gridview`

The screenshot shows a PowerShell Out-GridView window titled "\$Processes = import-csv .\Processes.csv | Out-GridView". The window contains a table with 12 columns: Name, SI, Handles, VM, WS, PM, NPM, Path, Company, CPU, and FileVersion. The table lists various system processes, with 'dfssvc' highlighted in blue. The CPU column shows values for each process, and the FileVersion column shows the version of the file.

PROCESSING DATA IN AN ARRAY TO TAKE AN ACTION

SOME USE CASES

- Use comparison operators to find properties that meet your criteria
 - eq -ne -gt -lt -like -nlike -match

Take action based on criteria match

- Add object to another report (filtering)
- Delete a process
- Disable a user account
- Create log entry

PROCESSING DATA IN AN ARRAY TO TAKE AN ACTION

Let's create a new process to use in our next example. Do this as Admin

```
PS>wmic process call create cmd
```

```
Executing (Win32_Process)->Create()
```

```
Method execution successful.
```

If you want to turn it up a notch, run the command several times

NOTE:If you are using ISE, you will see an error as well, NativeCommandError

CONGRATULATIONS, YOU JUST AUTOMATED AN ACTION USING POWERSHELL AND ARRAYS!

```
taskkill /F /PID:$($Process.ID)
write-host $Process.ID "was ended, because it matched $($Process.Name)"

}

}

SUCCESS: The process with PID 3284 has been terminated.
3284 was ended, because it matched cmd

SUCCESS: The process with PID 4512 has been terminated.
4512 was ended, because it matched cmd

SUCCESS: The process with PID 5024 has been terminated.
5024 was ended, because it matched cmd

SUCCESS: The process with PID 5908 has been terminated.
5908 was ended, because it matched cmd

C:\Users\Administrator> |
```

CLOSING THOUGHTS

- Learning how to manipulate arrays can be a gamechanger
- Increases accuracy
- Reduces overall effort to accomplish tasks at scale
- Automation enables us generate repeatable results
- Sky is the limit
- Everyone deserves arrays!
